RE: IOSAT Tablets (Anbex brand of potassium iodide for radiation protection)
ANDA 18-664
Shelf Life Extension

Dear Bill:

This will confirm that on January 7, 2004, following our submission of stability data and independent assay test results, the US Food and Drug Administration (FDA) granted Anbex a shelf life extension for IOSAT tablets from 5 to 7 years. Further, be advised that all product produced by Anbex after January, 2000 (which includes all IOSAT purchased by the California OES in 2002) is subject to constant monitoring, and is tested approximately every six months to assure it meets or exceeds all FDA specifications.

Accordingly, to correctly calculate the new expiration date for all IOSAT currently held by California, please add two years to the expiration date which is printed on the package.

I hope this information is helpful. If you have any questions, please do not hesitate to contact me at the number above.

Sincerely,

Alan Morris
President
Anbex
